THE BUSINESS SCHOOL AT GEORGIA TECH

Want to improve customer satisfaction and reduce waste from defects and non-value adding activities?

Georgia Tech's Six Sigma Certification Program will equip you with the skills you need to recognize inefficiencies and save your company money without a big capital investment.

Six Sigma principles can be applied across all industries in both services and manufacturing. As you go through the program, you will begin to look at every process in your organization through a different lens. Turn yourself into an invaluable asset with Six Sigma Certification from Georgia Tech.

Program Faculty

Lee Campe is an experienced Six Sigma instructor with a wide array of expertise in all facets of business. He has extensive experience deploying Six Sigma in transactional environments including sales, human resources, marketing, finance, information management, and manufacturing. Lee Campe is a past Master Black Belt for GE, Johnson & Johnson, JP Morgan Chase, and The Home Depot.

“The instructor was engaging and able to associate material to practical examples.”

Six Sigma in Action

The challenge:

“Our organization needed to streamline communication and processes across departmental silos and to eliminate waste and inefficiencies such as our amount of paper consumption.”

The solution:

“Six Sigma provided a methodology to solve everyday decisions across all levels of the organization including operations, finance, and IT, and bridged the communication gap between these departments to allow us to speak the same language.”

The results:

“Six Sigma provided a common language, a set of tools, and a philosophy that provided measurable improvement. It was also an integral part of our success in receiving the 2007 Georgia Oglethorpe Award for Organizational Quality and Excellence. We were able to reduce paper consumption by 40 percent, saving us \$100,000 or more within two weeks after the first Six Sigma course. The return on investment was almost immediate—one Six Sigma project can easily pay for itself tenfold.”
